Installing WebTracker to Chrome

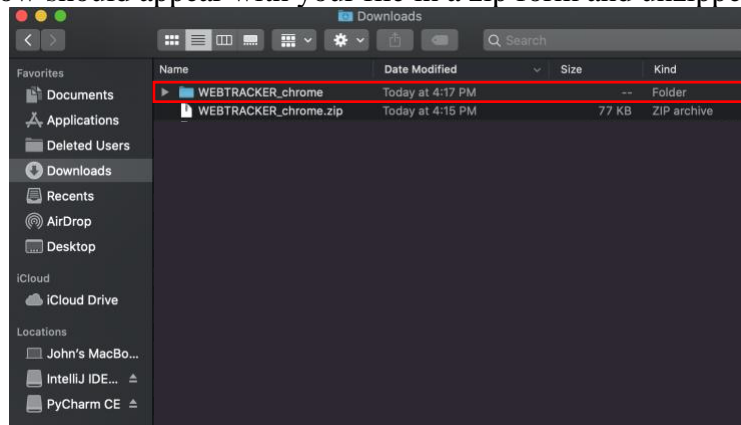

- Begin by visiting: <https://bit.ly/32h9sDo>

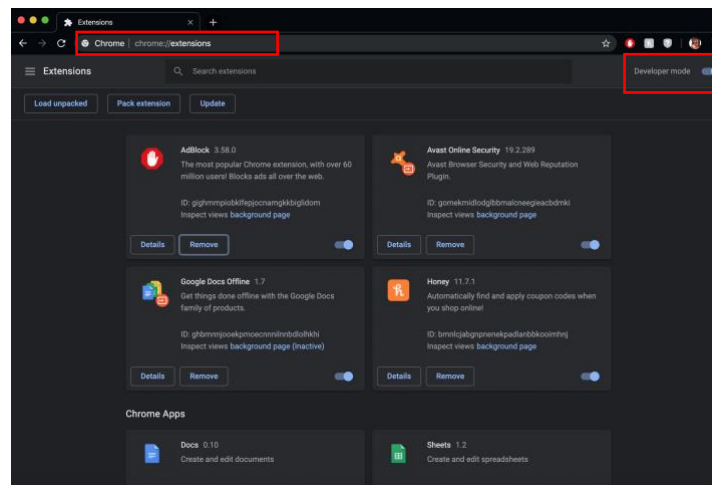

- Make sure the file name is “**WEBTRACKER_chrome.zip**”. Click “**Download**”
- You should see your file has installed at the bottom left. Click it

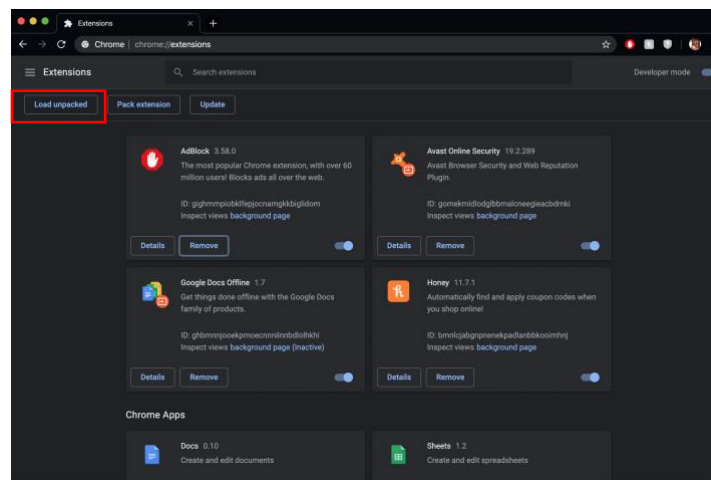

- A file window should appear with your file in a zip form and unzipped

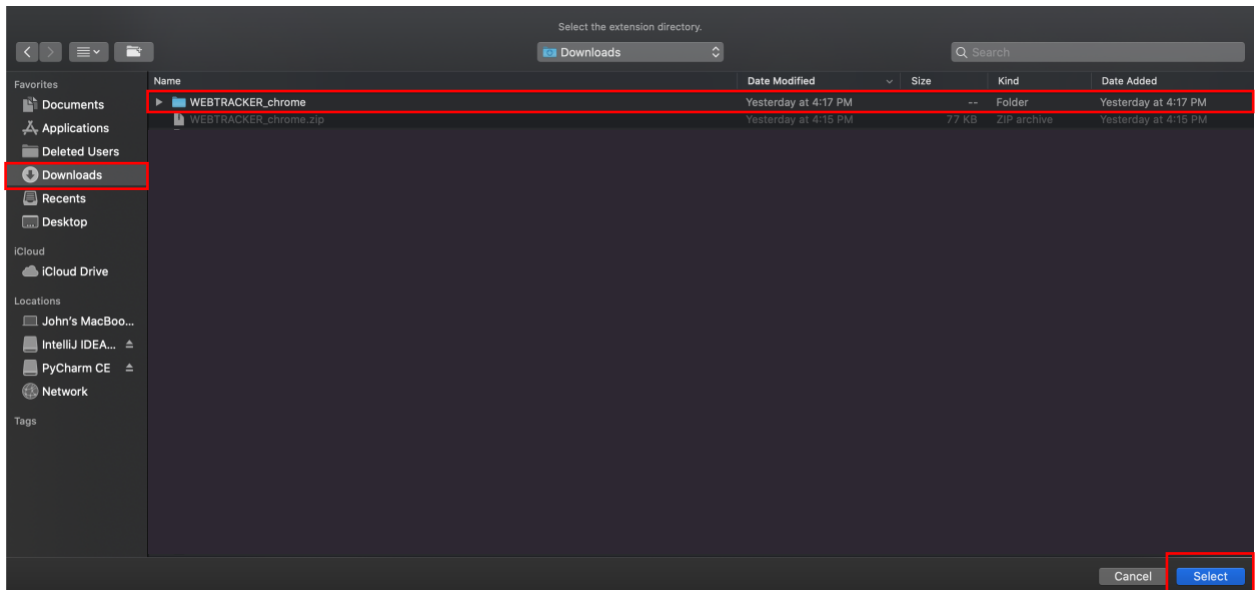

- Now open a new Chrome tab and go to “chrome://extensions” and click the slide to enable “Developer mode”

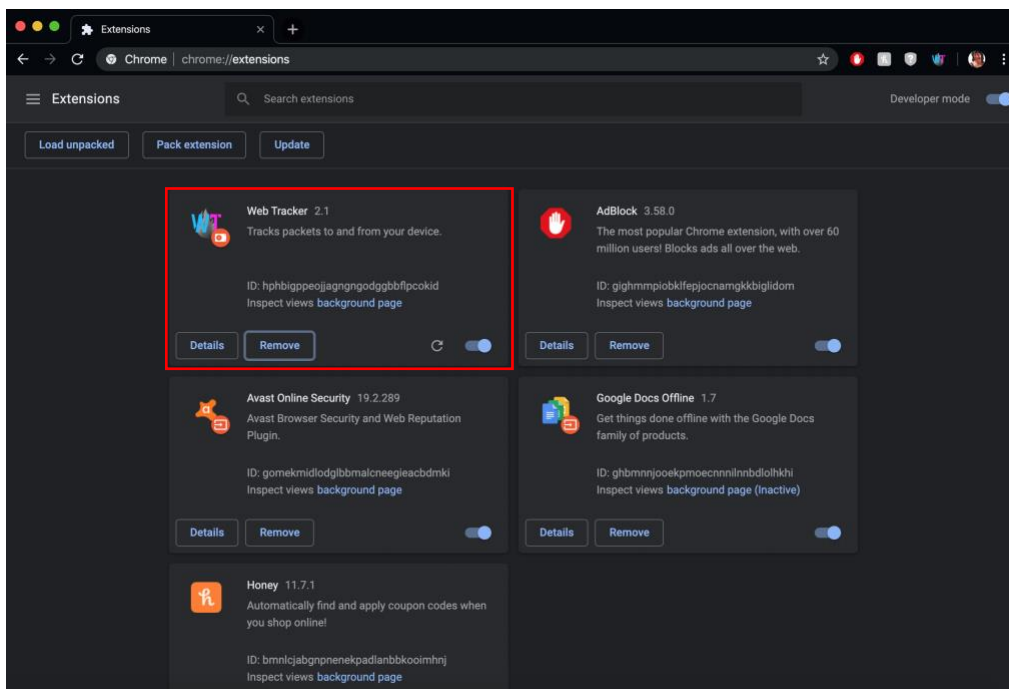

- Now click “Load unpacked”

- A file finder window should appear, navigate to your “**Downloads**” folder. Click the “**WEBTRACKER_chrome**” folder to select it and then click select

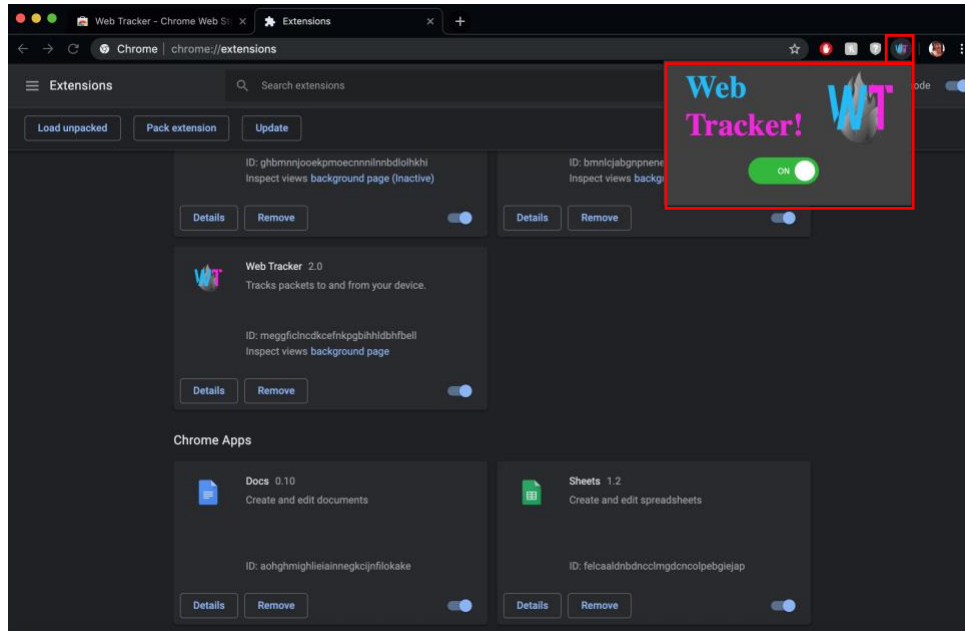

- It has successfully been added if you see it appear with the extensions (on your browser)

- You have successfully installed the extension

Using WebTracker

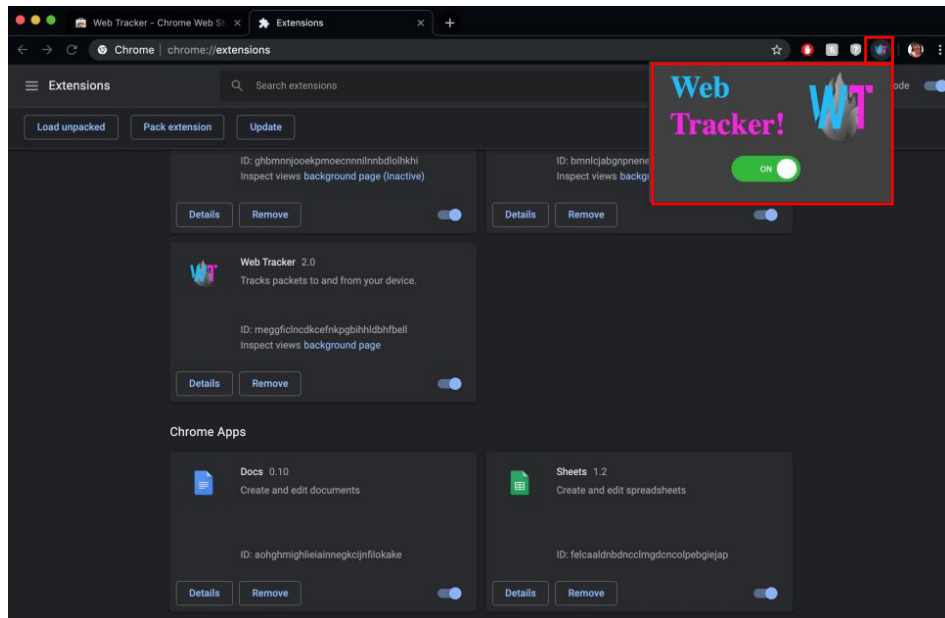

- To use WebTracker click the popup at the top to open the popup menu

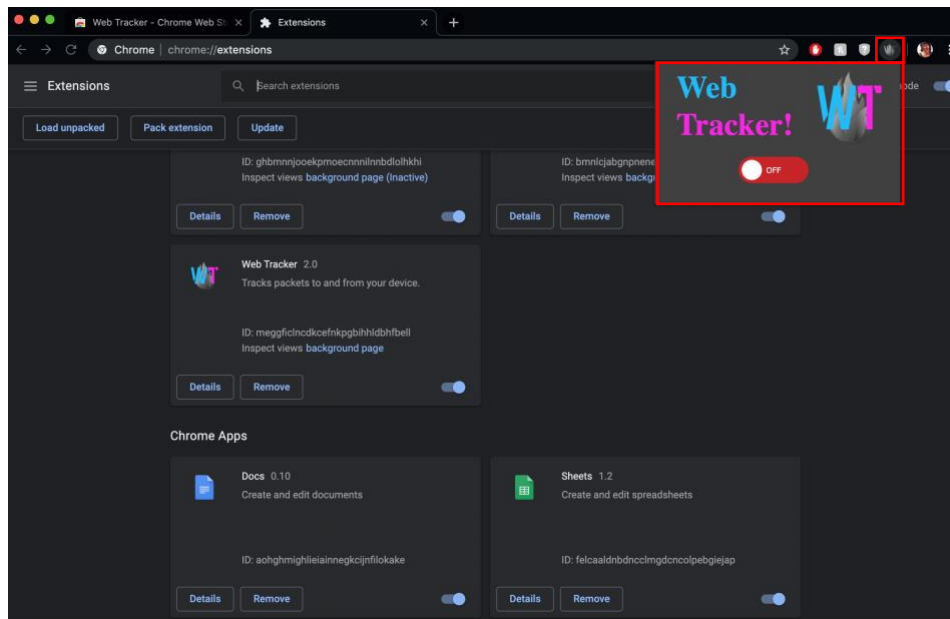

- The only functional part is the on/off switch, it dictates if WebTracker is sending your information or not

- The conditionals are as follows...
 - If the switch is **green**, switched to “**ON**”, and the icon is in color, your browsing information is being sent to the server.

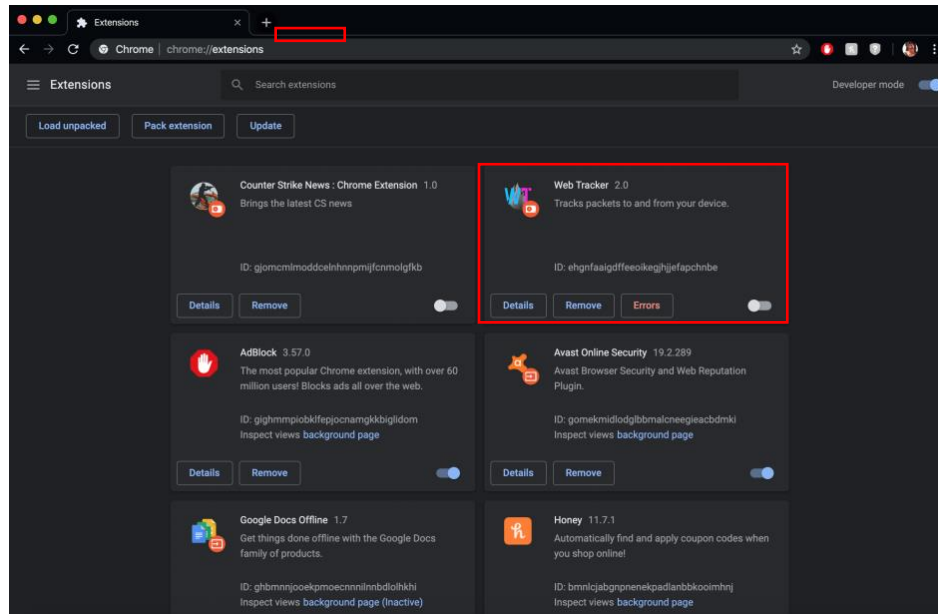

- If the switch is **red**, switched to “**OFF**”, and the icon is grayed out, none of your browsing information is being sent to the server.

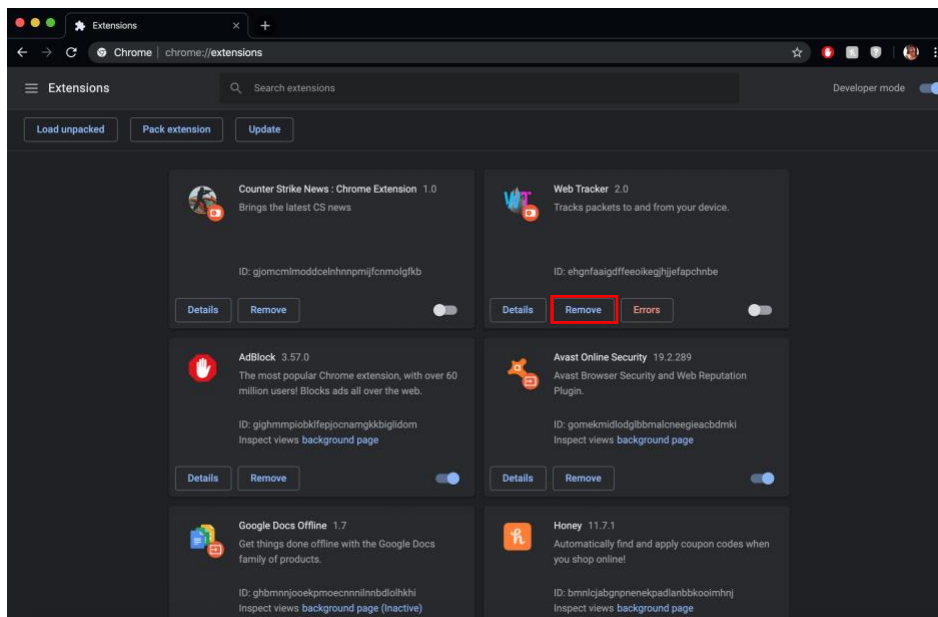

Uninstalling WebTracker

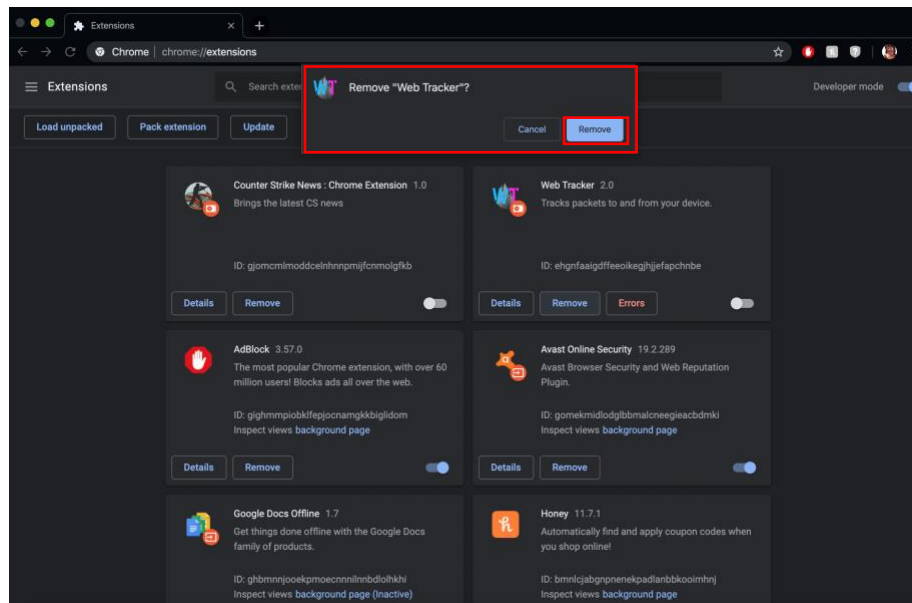

- To uninstall WebTracker open a new tab and type in “**chrome://extensions**”
You should see WebTracker listed

- Click the “**Remove**” button within WebTracker’s space

- Now click “**Remove**” in the pop-up that appeared

- WebTracker is now uninstalled
