Installing WebTracker to Chrome

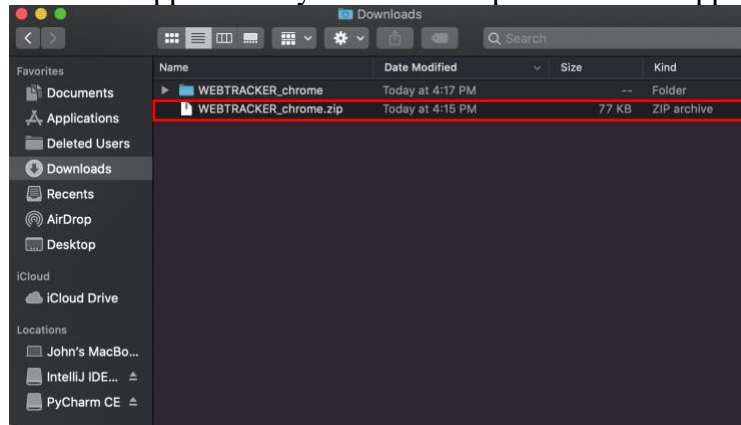

- Begin by visiting: <https://bit.ly/2MLIHRQ>

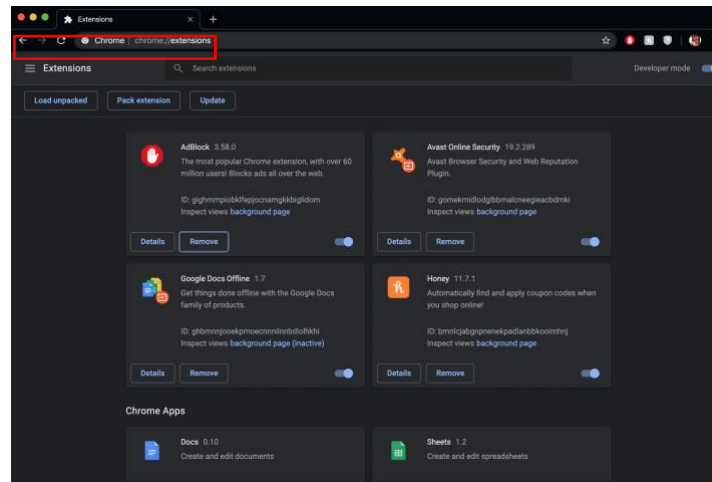

- Make sure the file name is “**WEBTRACKER_chrome.zip**”. Click “**Download**”
- You should see your file has installed at the bottom left. Click it

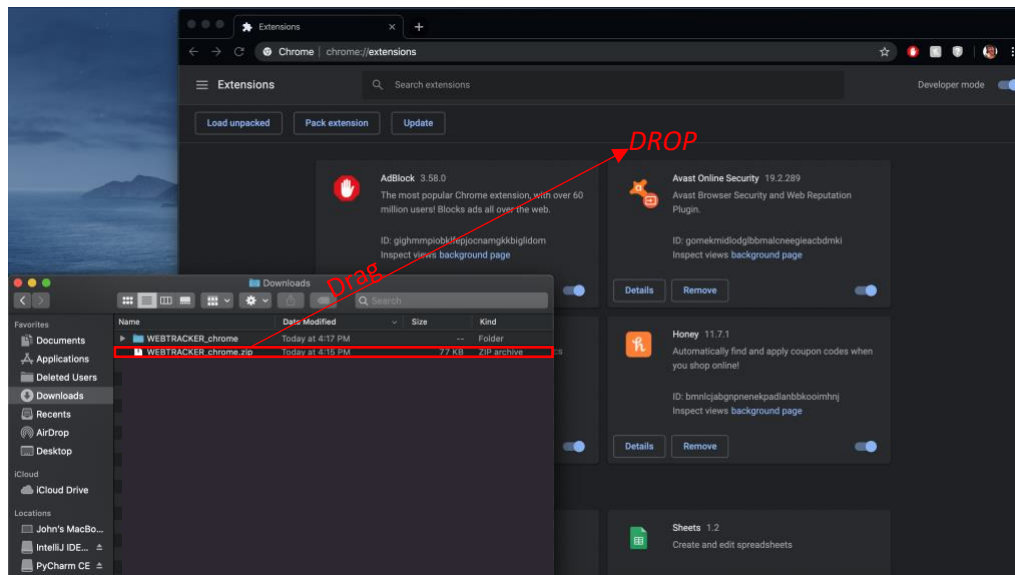

- A file window should appear with your file in a zip form and unzipped

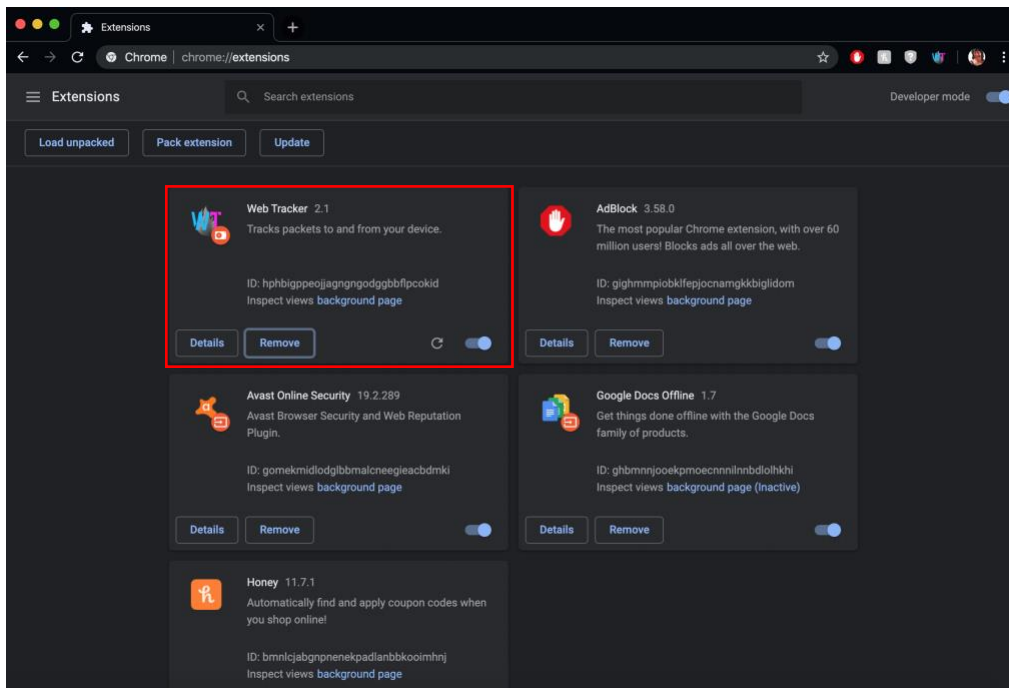

- Now open a new Chrome tab and go to “chrome://extensions”

- Now orient your browser window and download folder like this. Then drag and drop your “WEBTRACKER_chrome.zip” file onto the chrome browser, then let go.

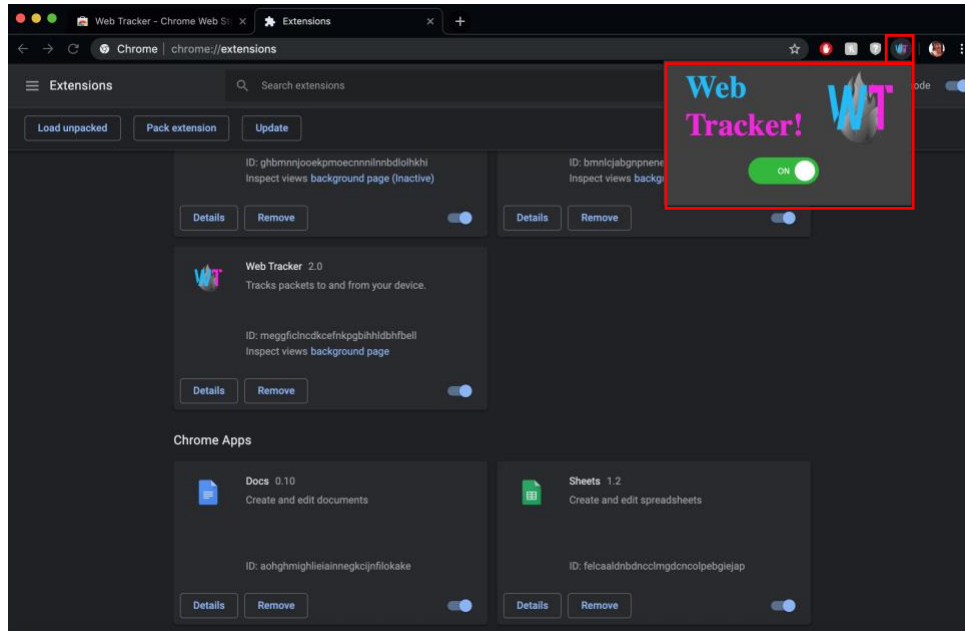

- It has successfully been added if you see it appear with the extensions (on your browser)

- You have successfully installed the extension

Using WebTracker

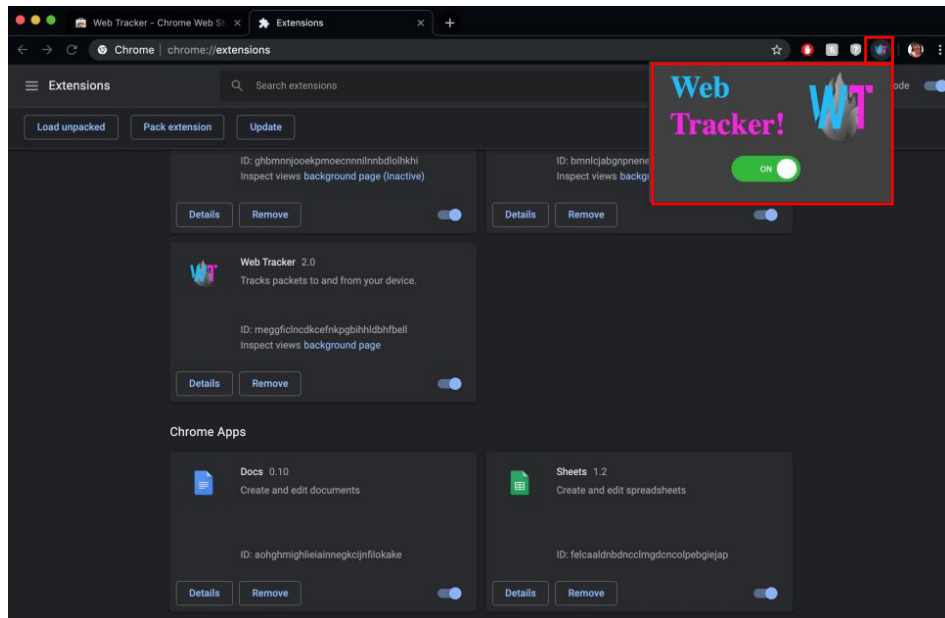

- To use WebTracker click the popup at the top to open the popup menu

- The only functional part is the on/off switch, it dictates if WebTracker is sending your information or not

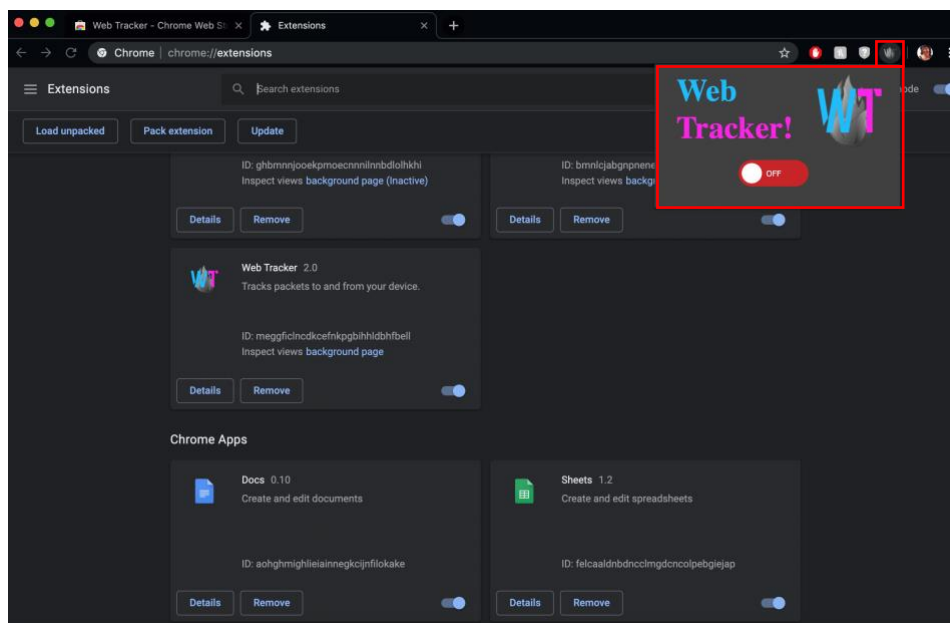

- The conditionals are as follows...
 - If the switch is **green**, switched to “ON”, and the icon is in color, your browsing information is being sent to the server.

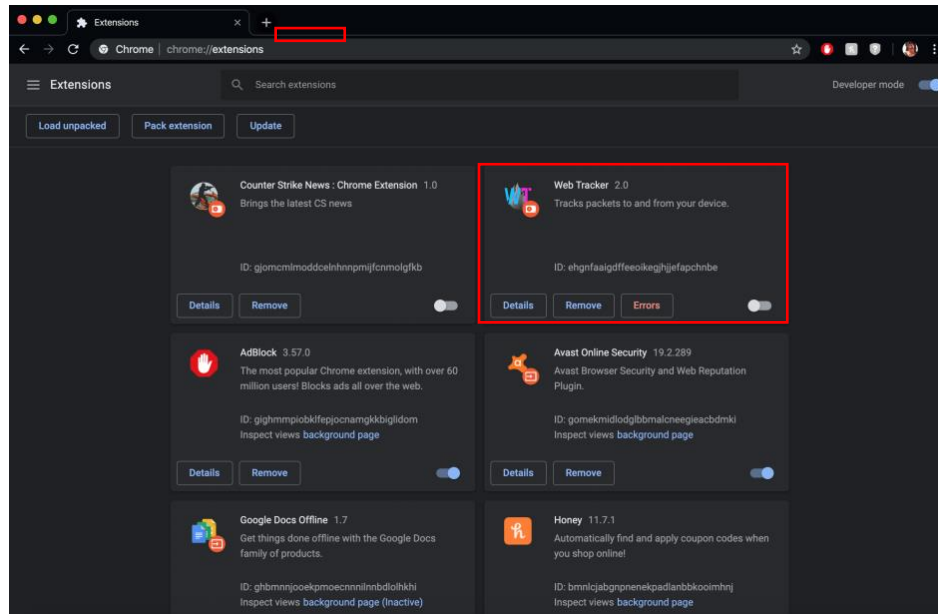

- If the switch is **red**, switched to “OFF”, and the icon is grayed out, none of your browsing information is being sent to the server.

Note: when WebTracker is first installed it will be colored in to show it is present. It will not be sending any of your information. The first time you switch “ON” to “OFF”, the icon will finally become grayed out.

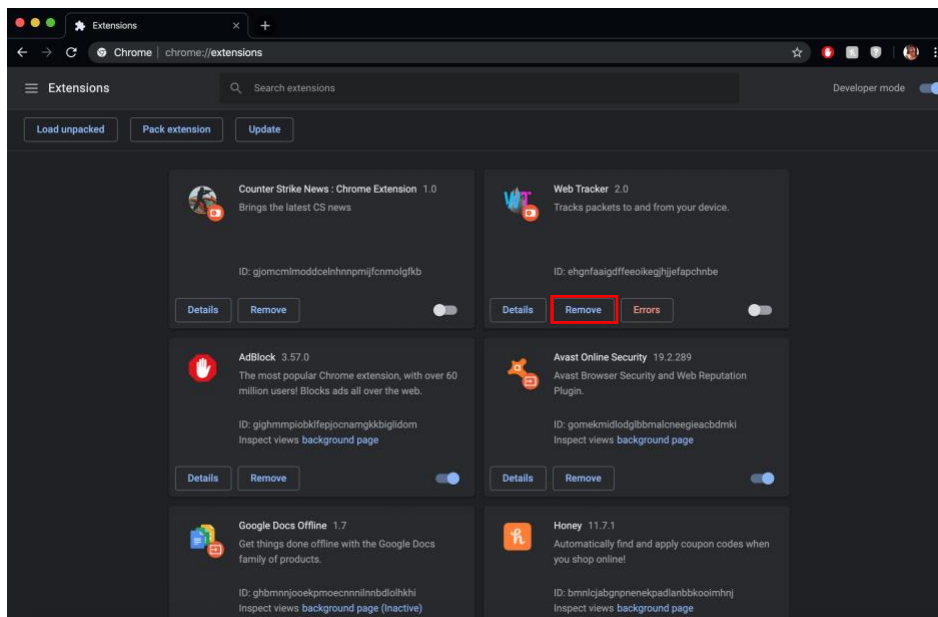

Uninstalling WebTracker

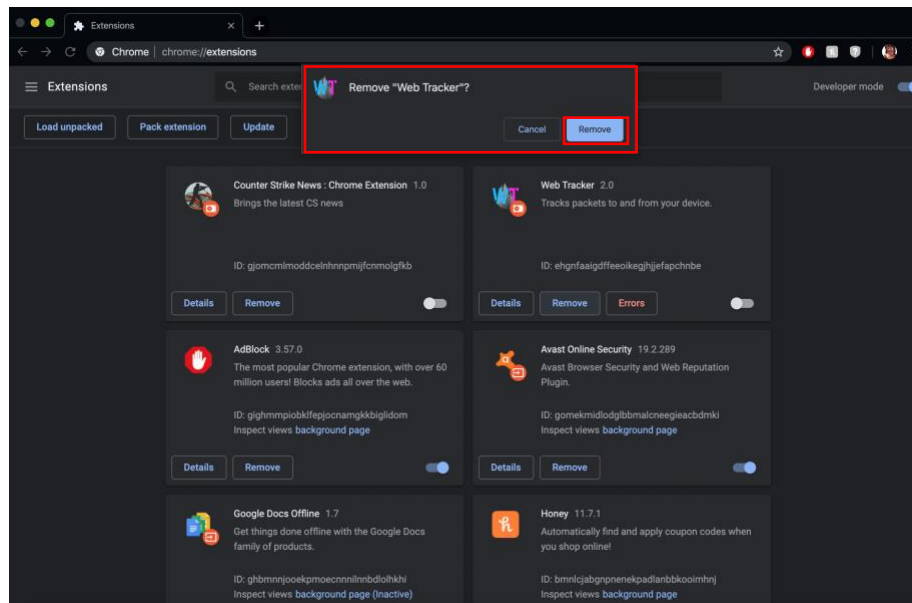

- To uninstall WebTracker open a new tab and type in “**chrome://extensions**”
You should see WebTracker listed

- Click the “**Remove**” button within WebTracker’s space

- Now click “**Remove**” in the pop-up that appeared

- WebTracker is now uninstalled
