
WebTracker Chrome

Installation Guide

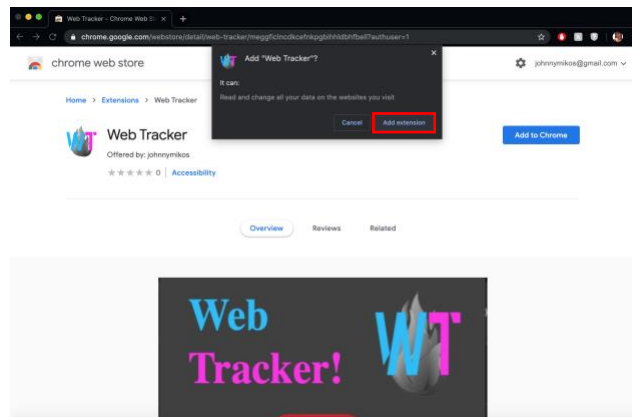

Adding WebTracker to Chrome

- Begin by visiting: <https://chrome.google.com/webstore/detail/web-tracker/meggfclncdkcefnkpgbihhldbhfbell?authuser=1>

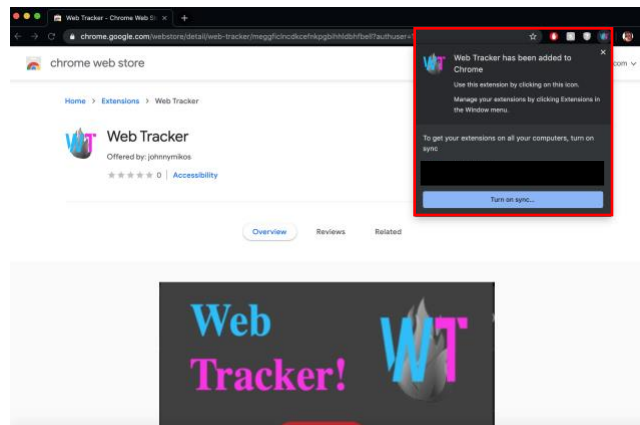

- Now click “**Add to Chrome**”

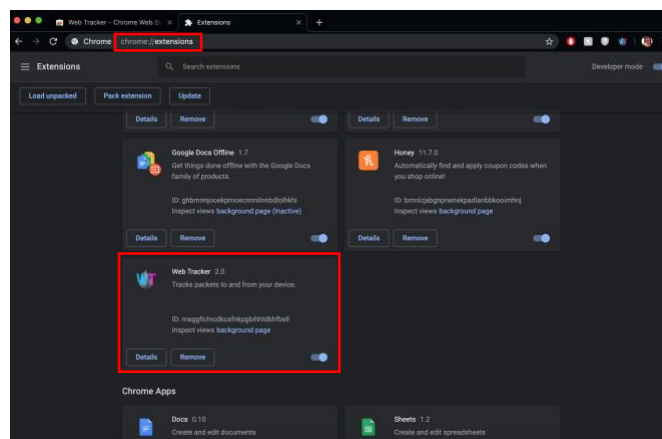

- Then click “**Add Extension**” when this popup appears

- It has successfully been added if you see this popup appear

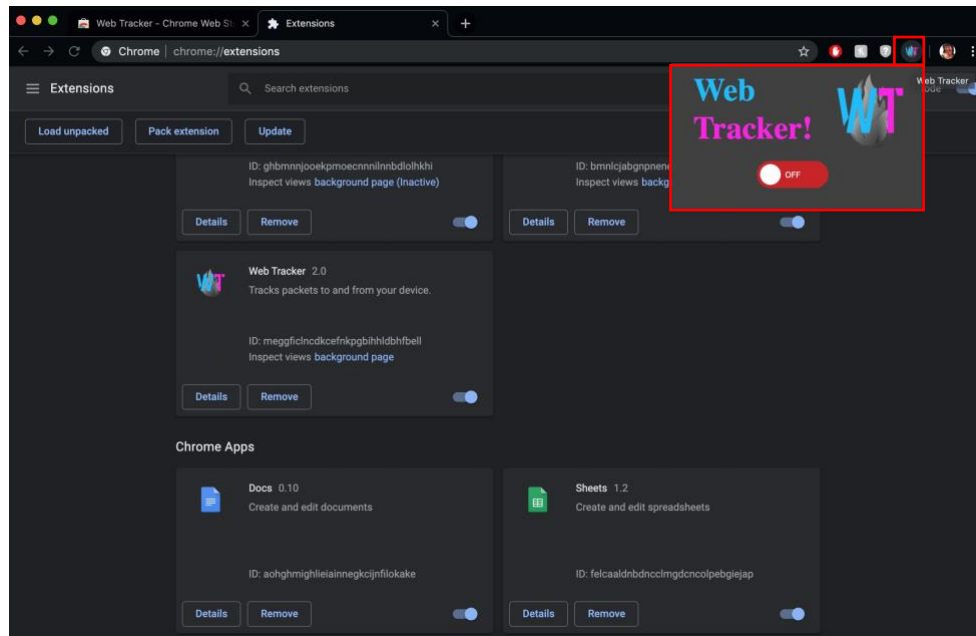

- Continue by opening a new tab and typing in “**chrome://extensions**”
From here you will be able to turn off/on or remove extensions
(may need to scroll down to find WebTracker)

- You have successfully installed the extension

Using WebTracker

- To use WebTracker click the popup at the top to open the popup menu

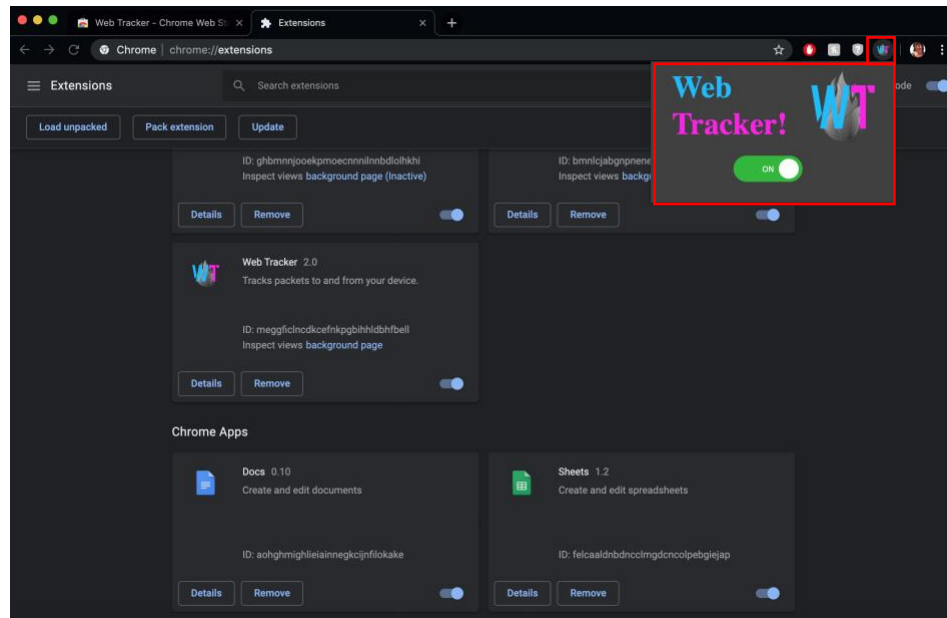

- The only functional part is the on/off switch, it dictates if WebTracker is sending your information or not

- The conditionals are as follows...

- If the switch is **green**, switched to “ON”, and the icon is in color, your browsing information is being sent to the server.

- If the switch is **red**, switched to “OFF”, and the icon is grayed out, none of your browsing information is being sent to the server.

Note: when WebTracker is first installed it will be colored in to show it is present. It will not be sending any of your information. The first time you switch “ON” to “OFF”, the icon will finally become grayed out.
