WebTracker Firefox

Installation Guide

## Table of Contents

Installing WebTracker to Firefox

- Begin by visiting: https://bit.ly/2C8qV6p
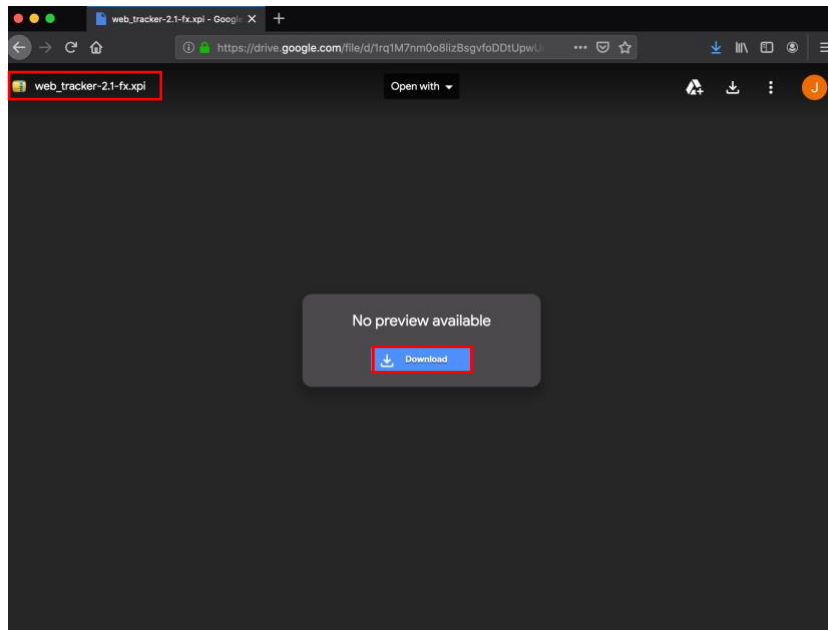

- Make sure the file name at the top right is "web_tracker-2.1-fx.xpi". Click "**Download**"

- You should get a popup that appears like this

- Make sure "Save File" is chosen. Then press "OK"

- Open a window to view your files (chose based on your operating system)
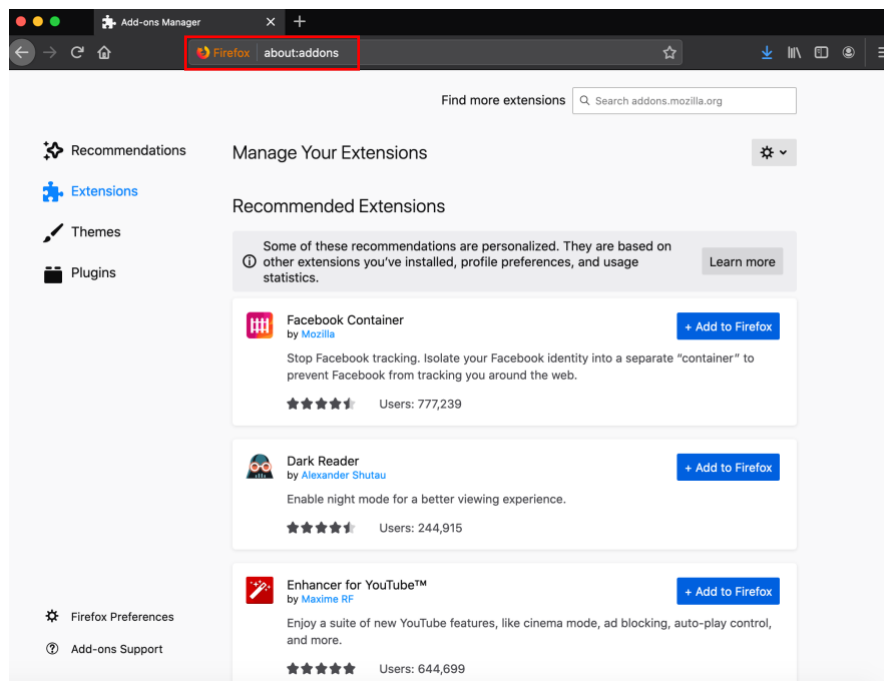

Icon for Windows

Icon for Mac

- You should see a side folder to "**Downloads**", double click this until you get to downloads and see your "**web_tracker-2.1-fx.xpi**" file (here is example on mac)

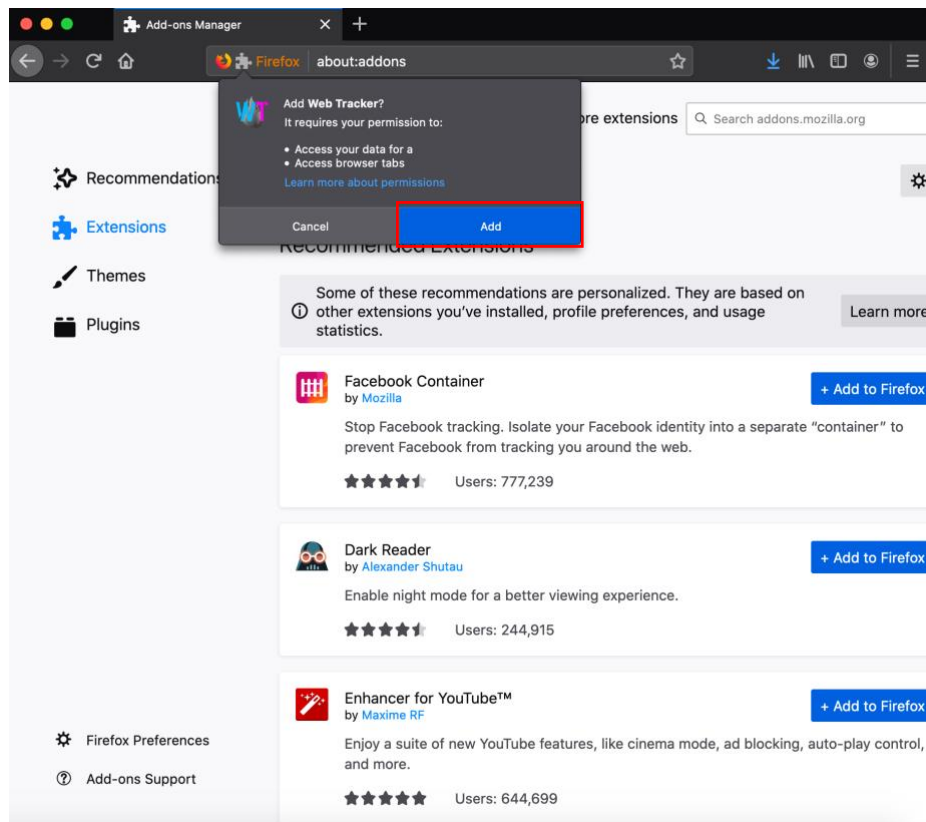

- Also open new tab on Mozilla Firefox and go to "**about:addons**"

- Orient your downloads folder with your browser like this. Then drag and drop your "**web_tracker-2.1-fx.xpi**" file onto the firefox browser, then let go.
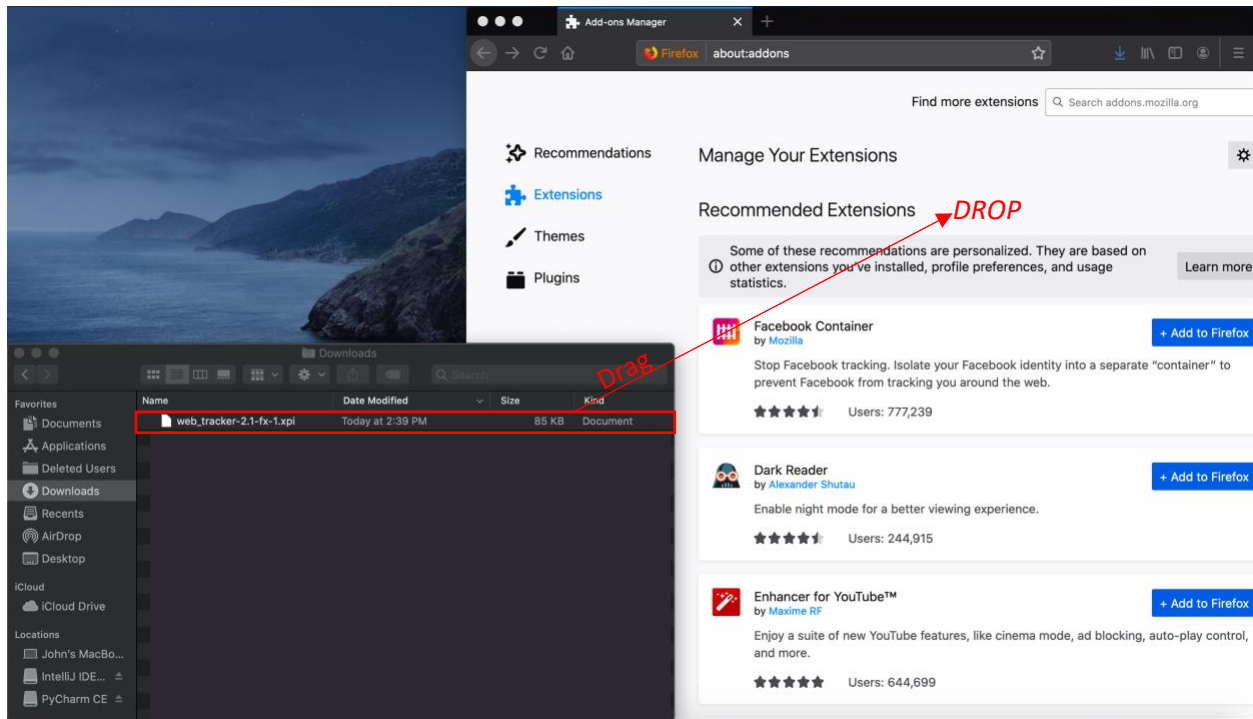

- You should see a popup appear as below, click "**Add**"

- It has successfully been added if you see this popup appear
- You will also see WebTracker present in the "**Enabled**" section
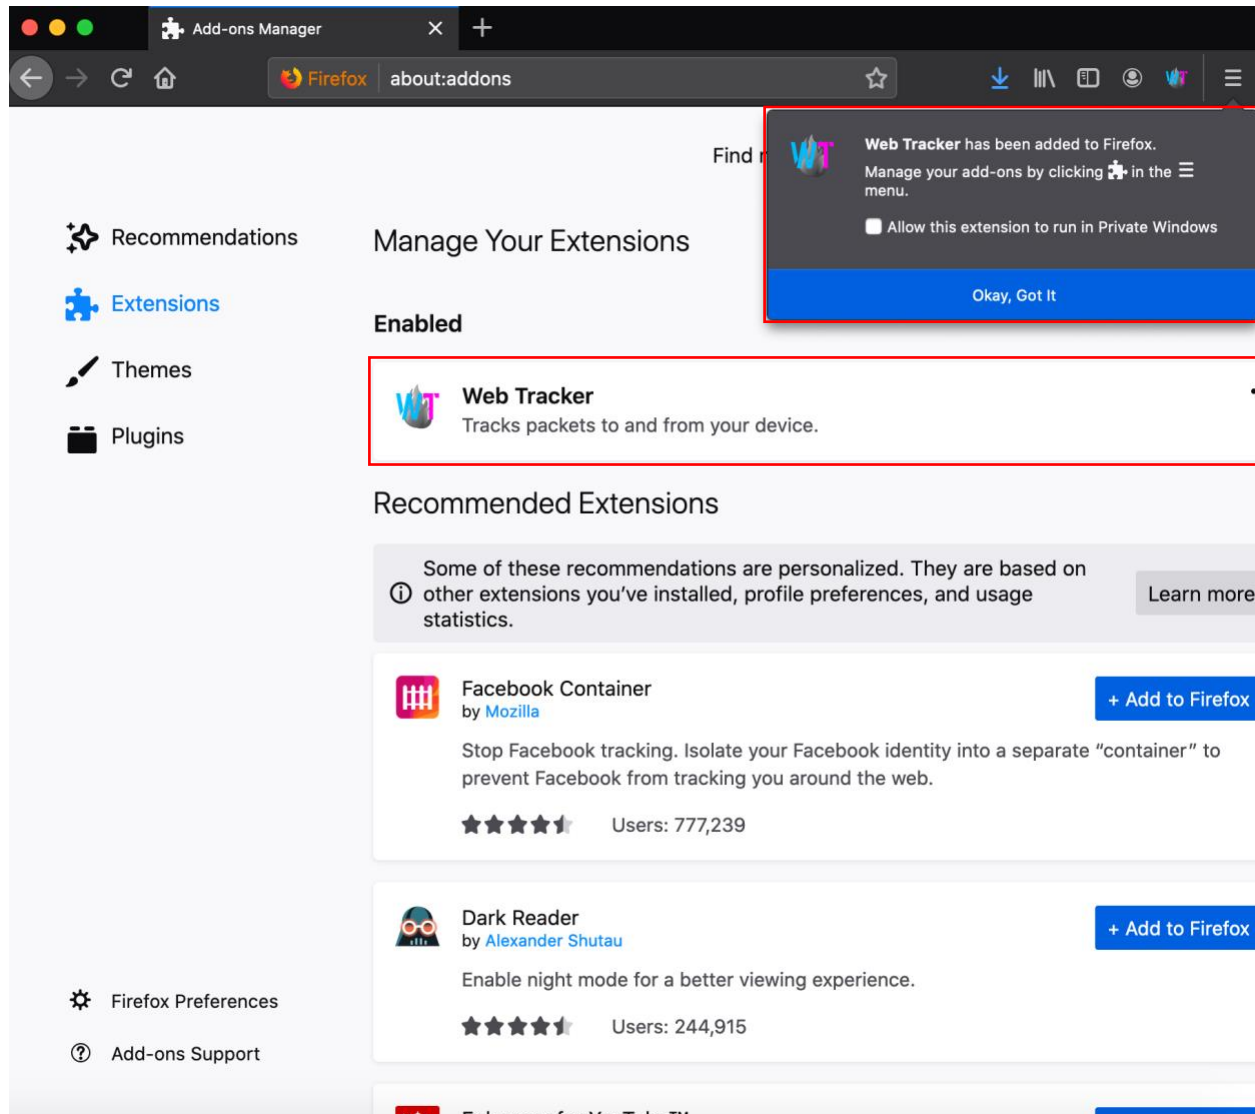

- You have successfully installed the extension

Using WebTracker

- To use WebTracker click the popup at the top to open the popup menu

- The only functional part is the on/off switch, it dictates if WebTracker is sending your information or not
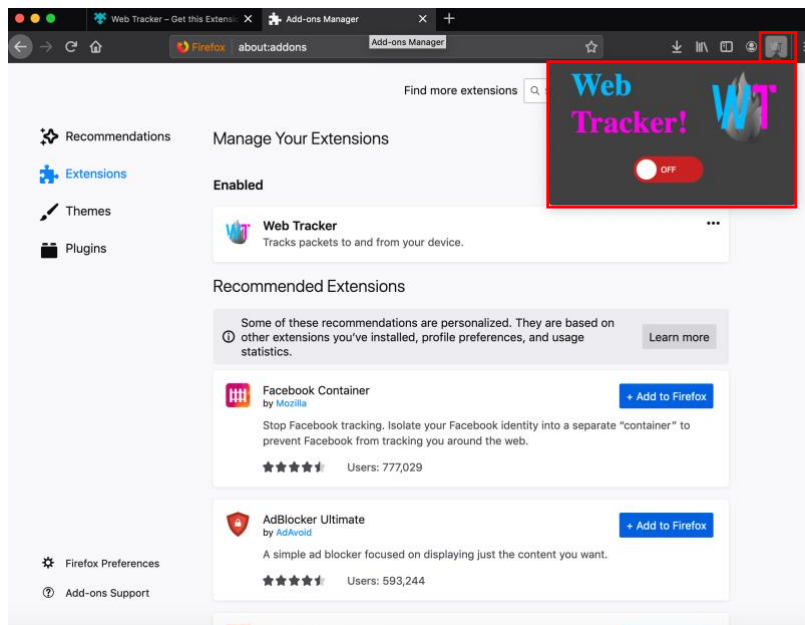

- The conditionals are as follows…

  o If the switch is **green**, switched to "**ON**", and the icon is in color, your browsing information is being sent to the server.

  o If the switch is **red**, switched to "**OFF**", and the icon is grayed out, none of your browsing information is being sent to the server.
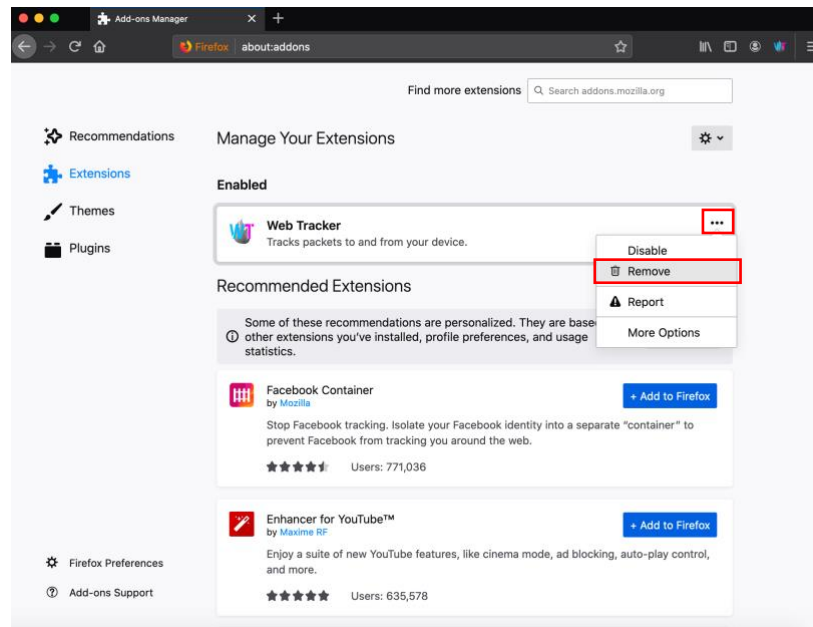

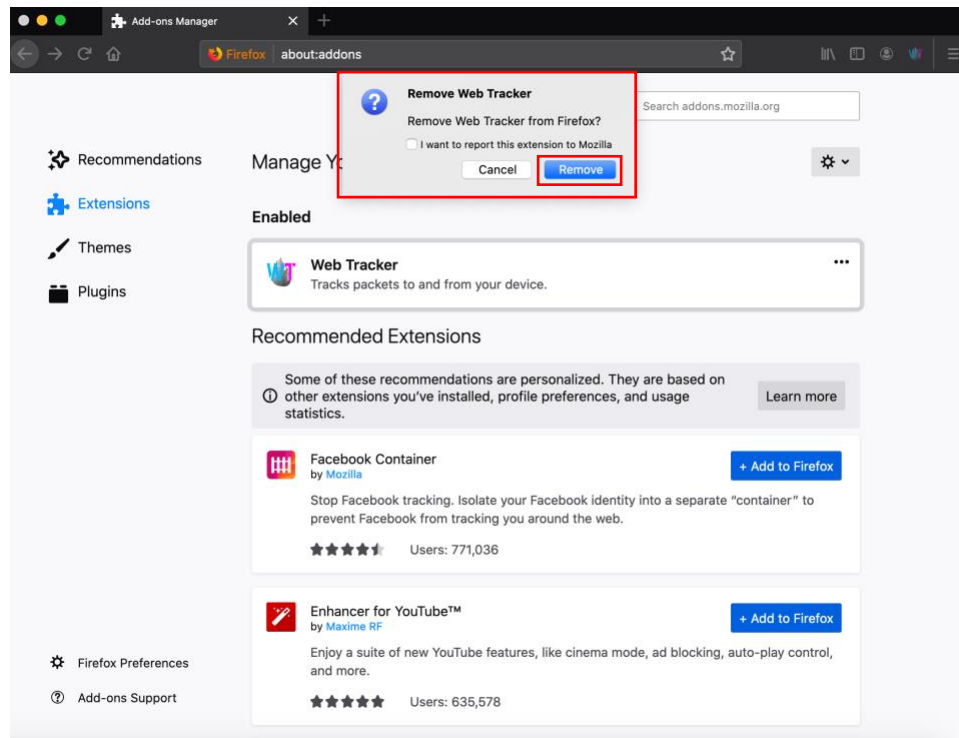

Uninstalling WebTracker

- To uninstall WebTracker open a new tab and type in "**about:addons**"
  You should see WebTracker listed

- Click the three dots within WebTracker's space. In the dropdown menu click "**Remove**"

- Now click "**Remove**" in the pop-up that appeared

- WebTracker is now uninstalled
